Colorwork Charts

Two-colour knitting charts and notes on reading them.

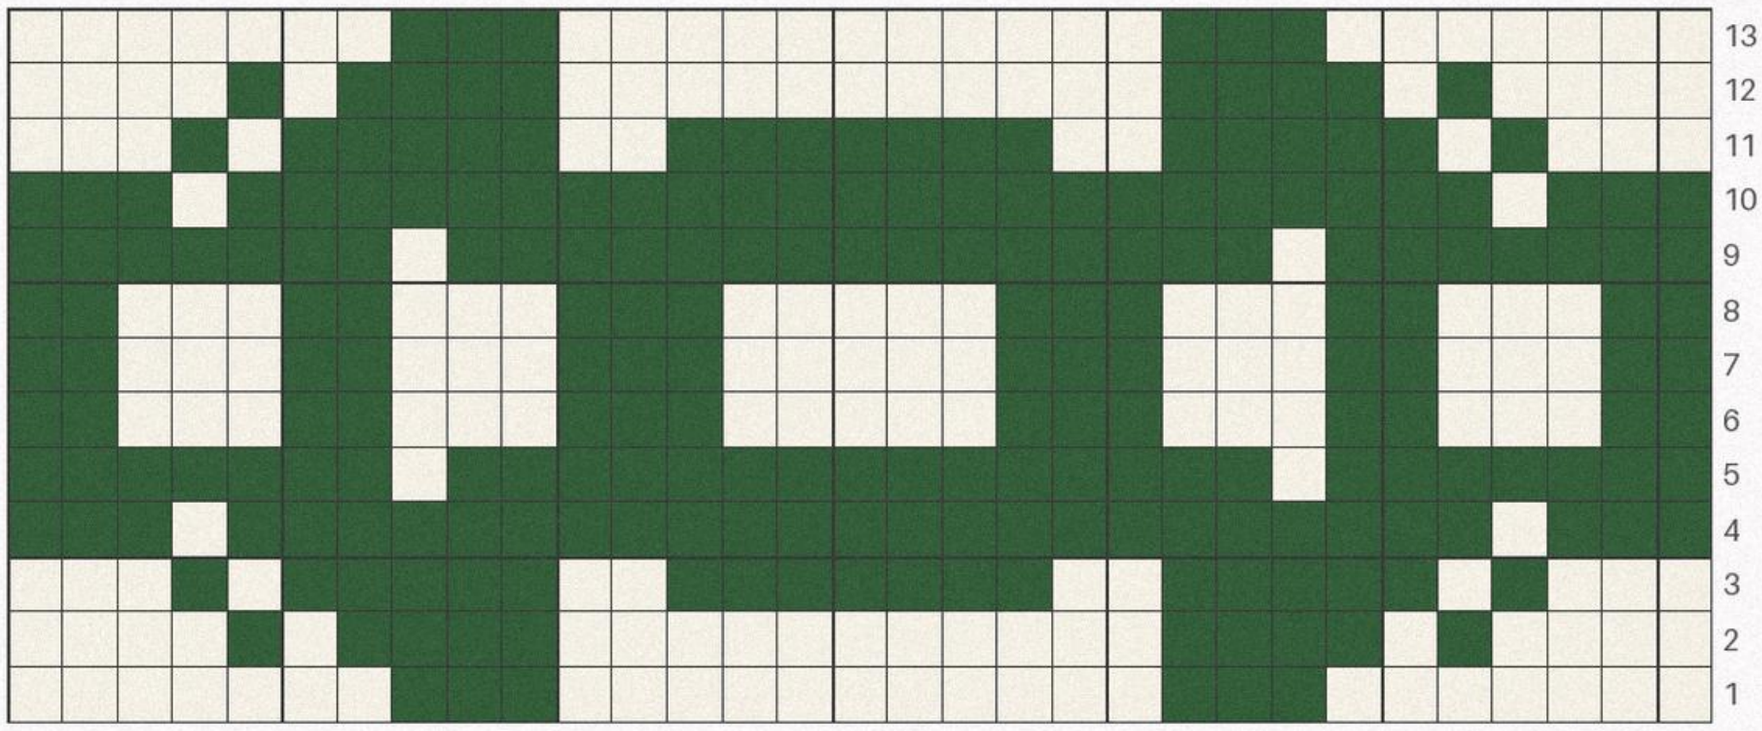

Printed from hazel.sanriodevgroup.org

Floats and how long they may be

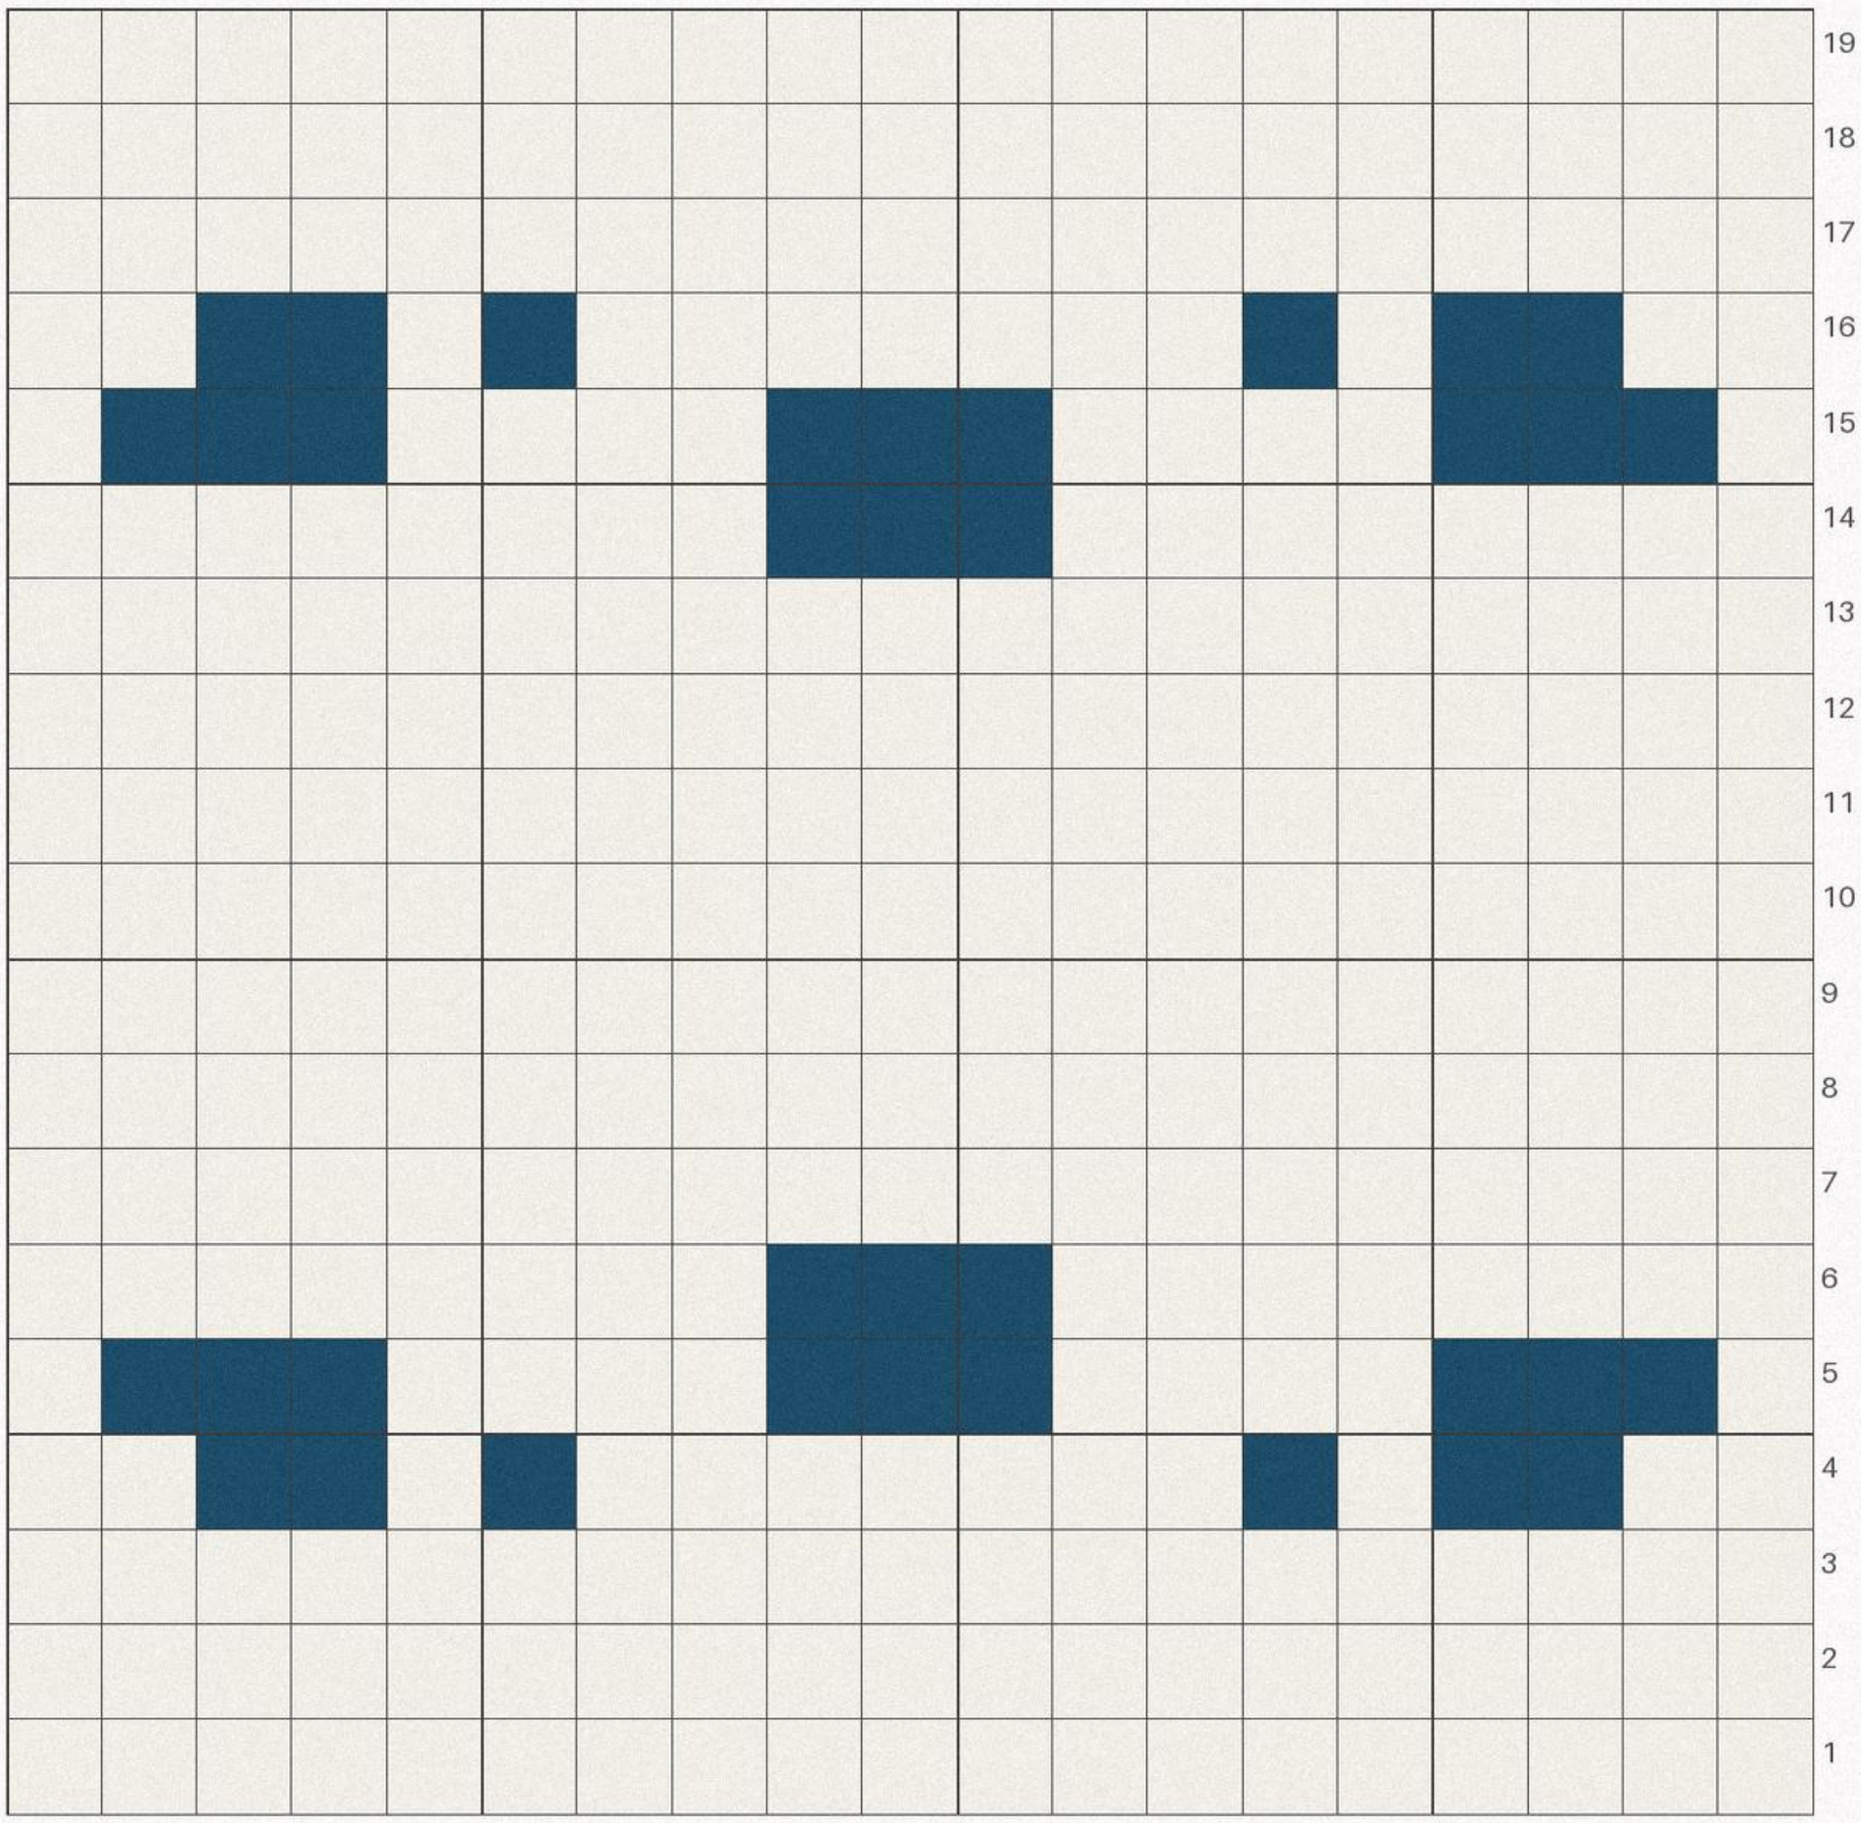

Catch any float longer than five stitches.

Floats and how long they may be

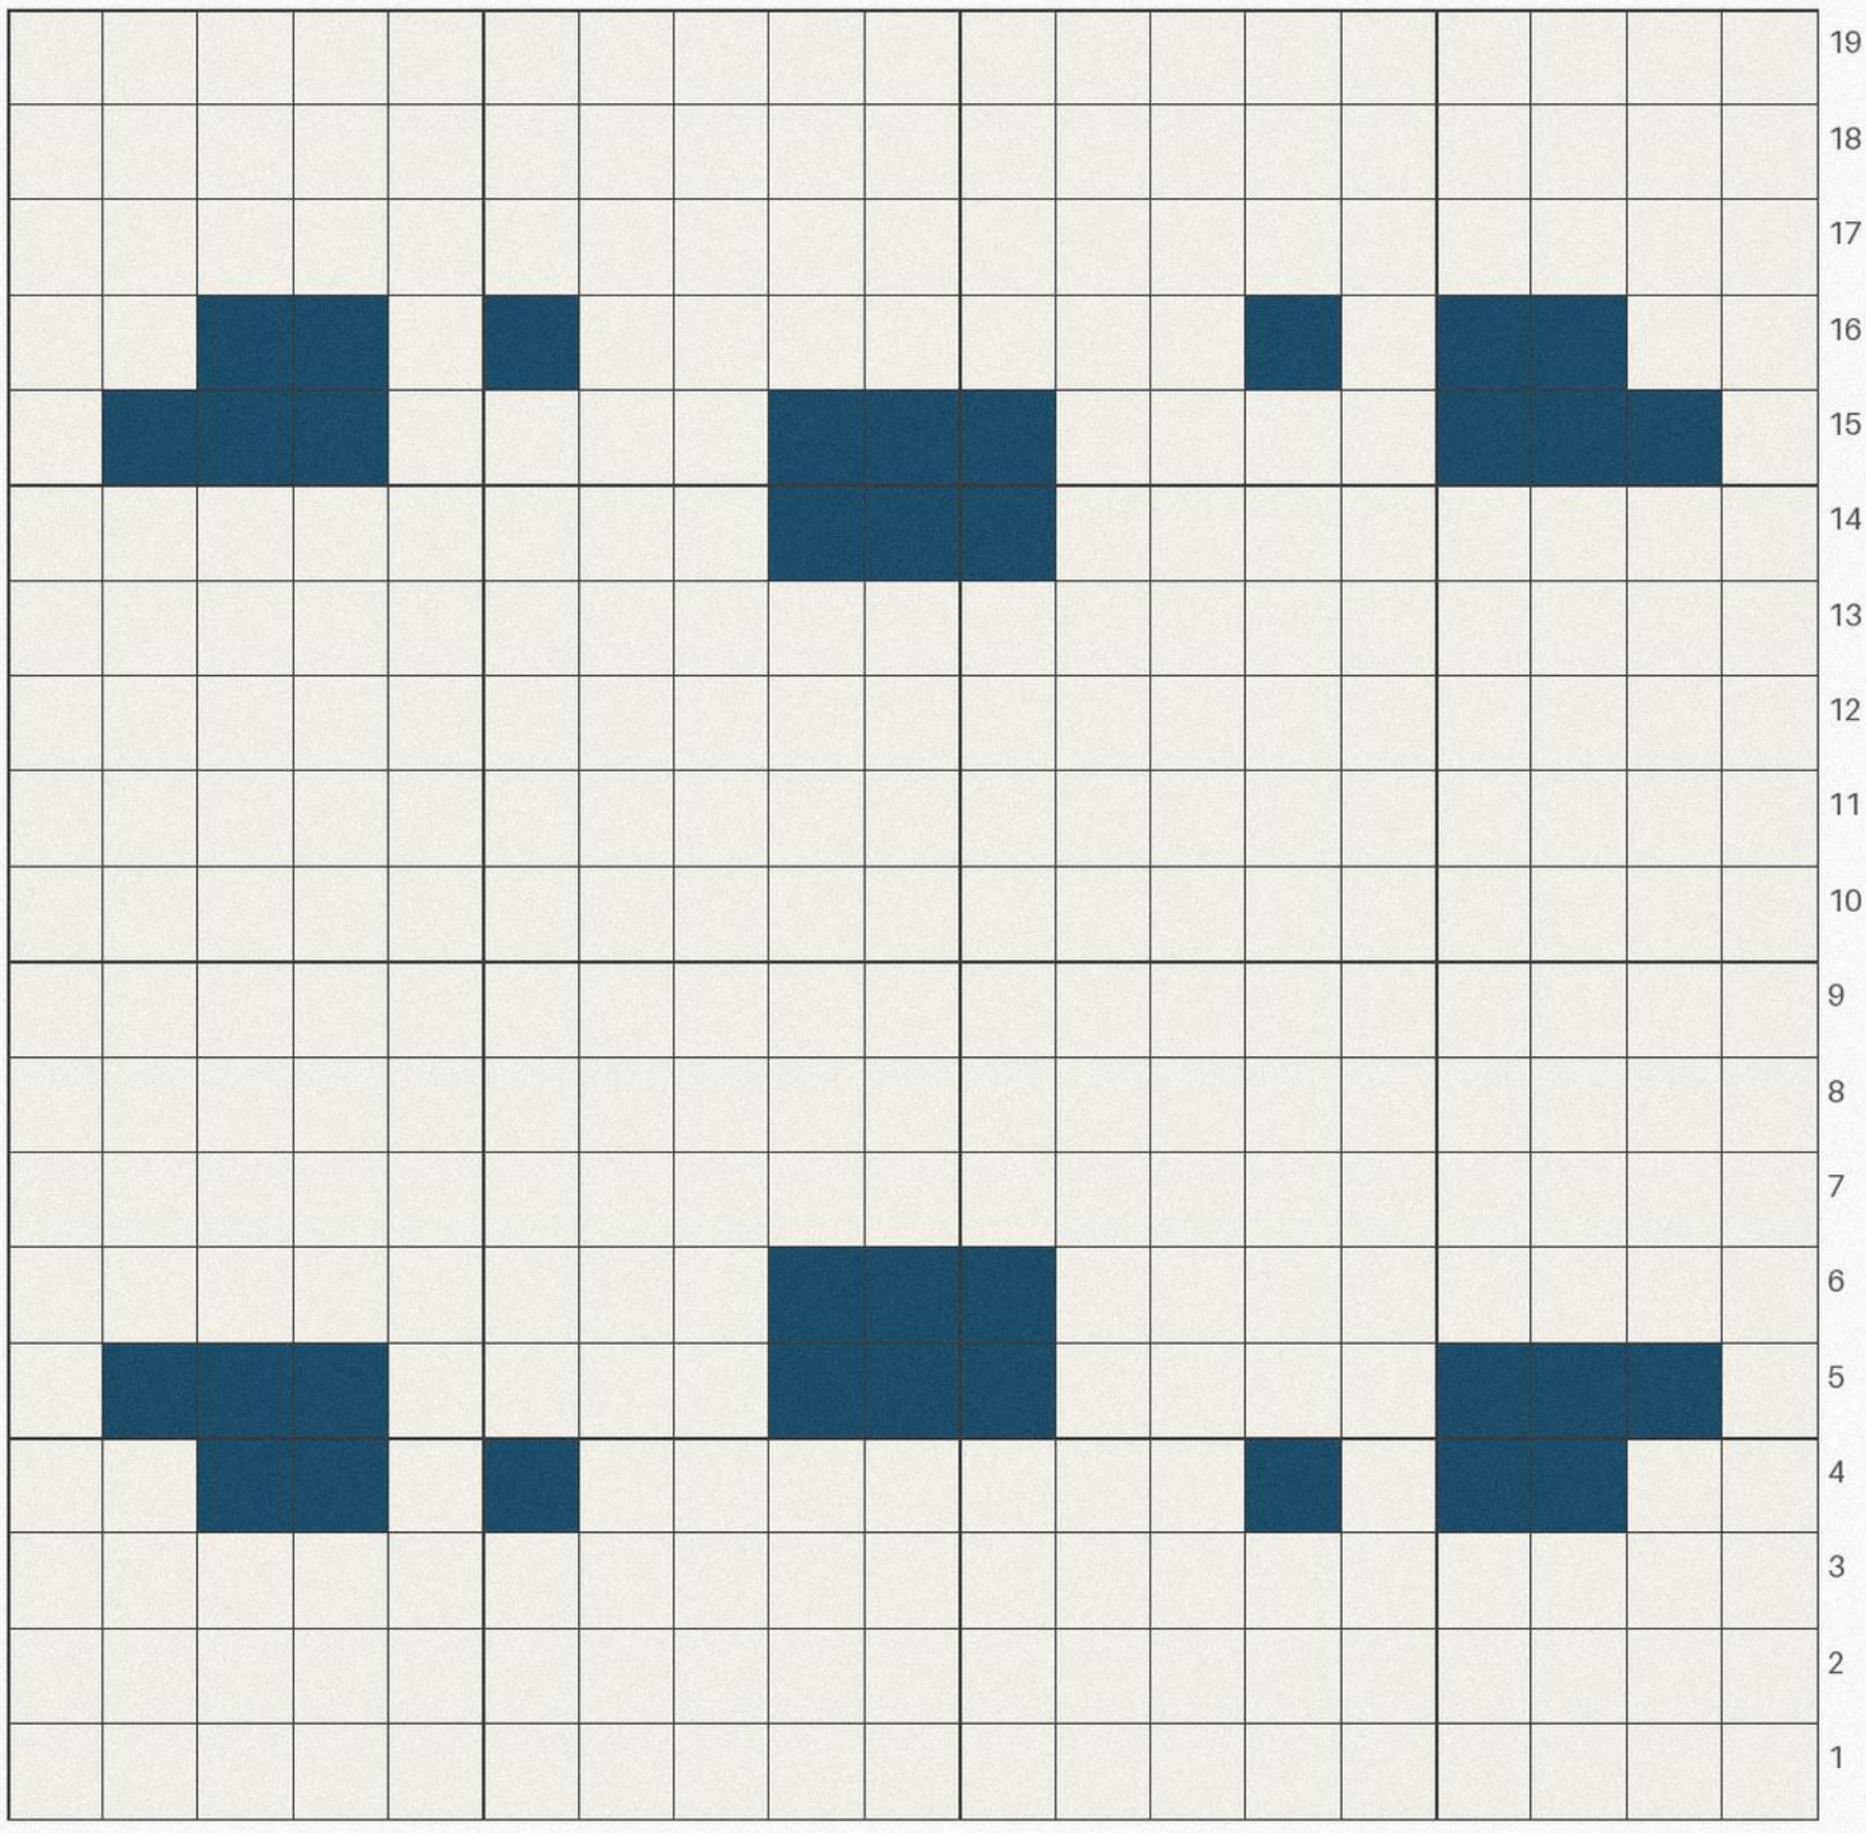

A float is the strand carried behind work of the other colour. Long floats snag on fingers; catch them at the back every three to five stitches.

Reading charts from the right

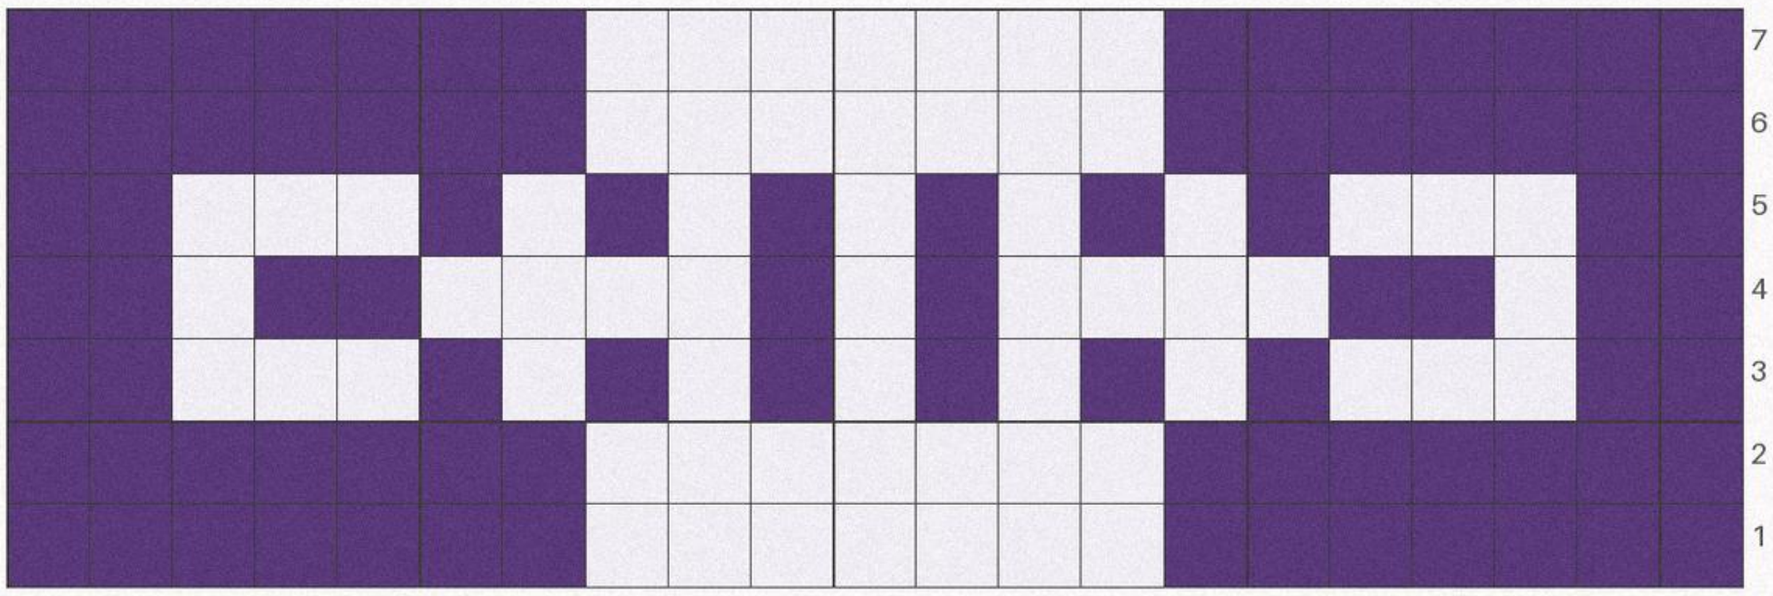

In the round, every row starts at the right edge.

Reading charts from the right

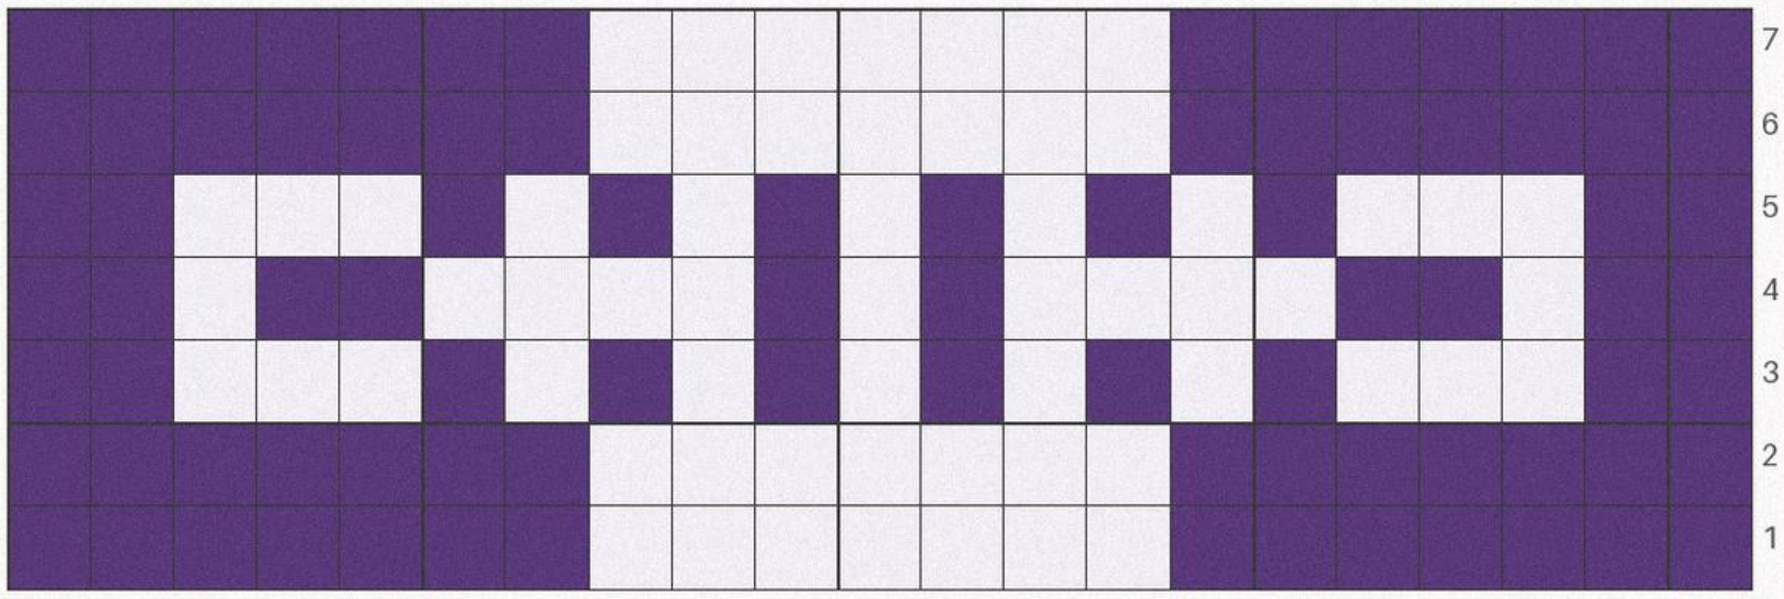

Knitting in the round always moves right to left, so every chart row is read from the right. Row numbers sit on the right side of the chart for that reason.

Small peerie patterns for yokes

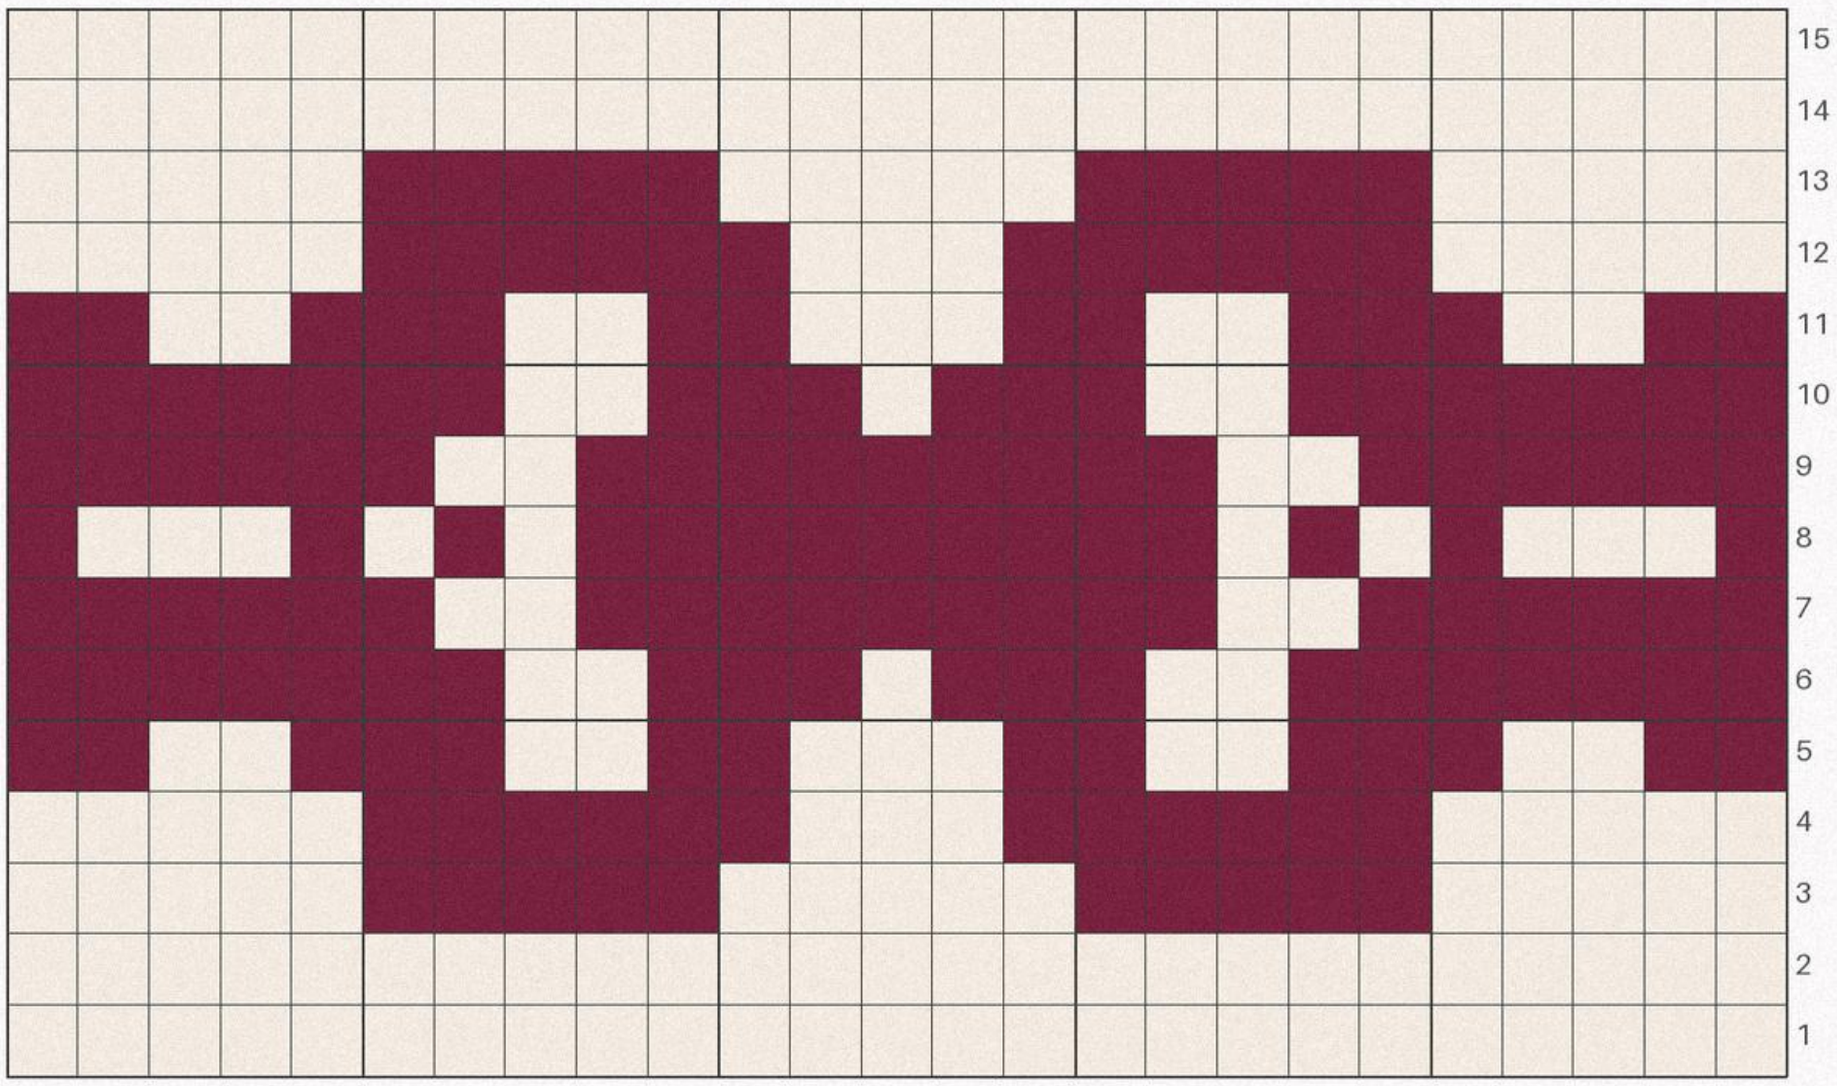

Short bands between larger motifs.

Small peerie patterns for yokes

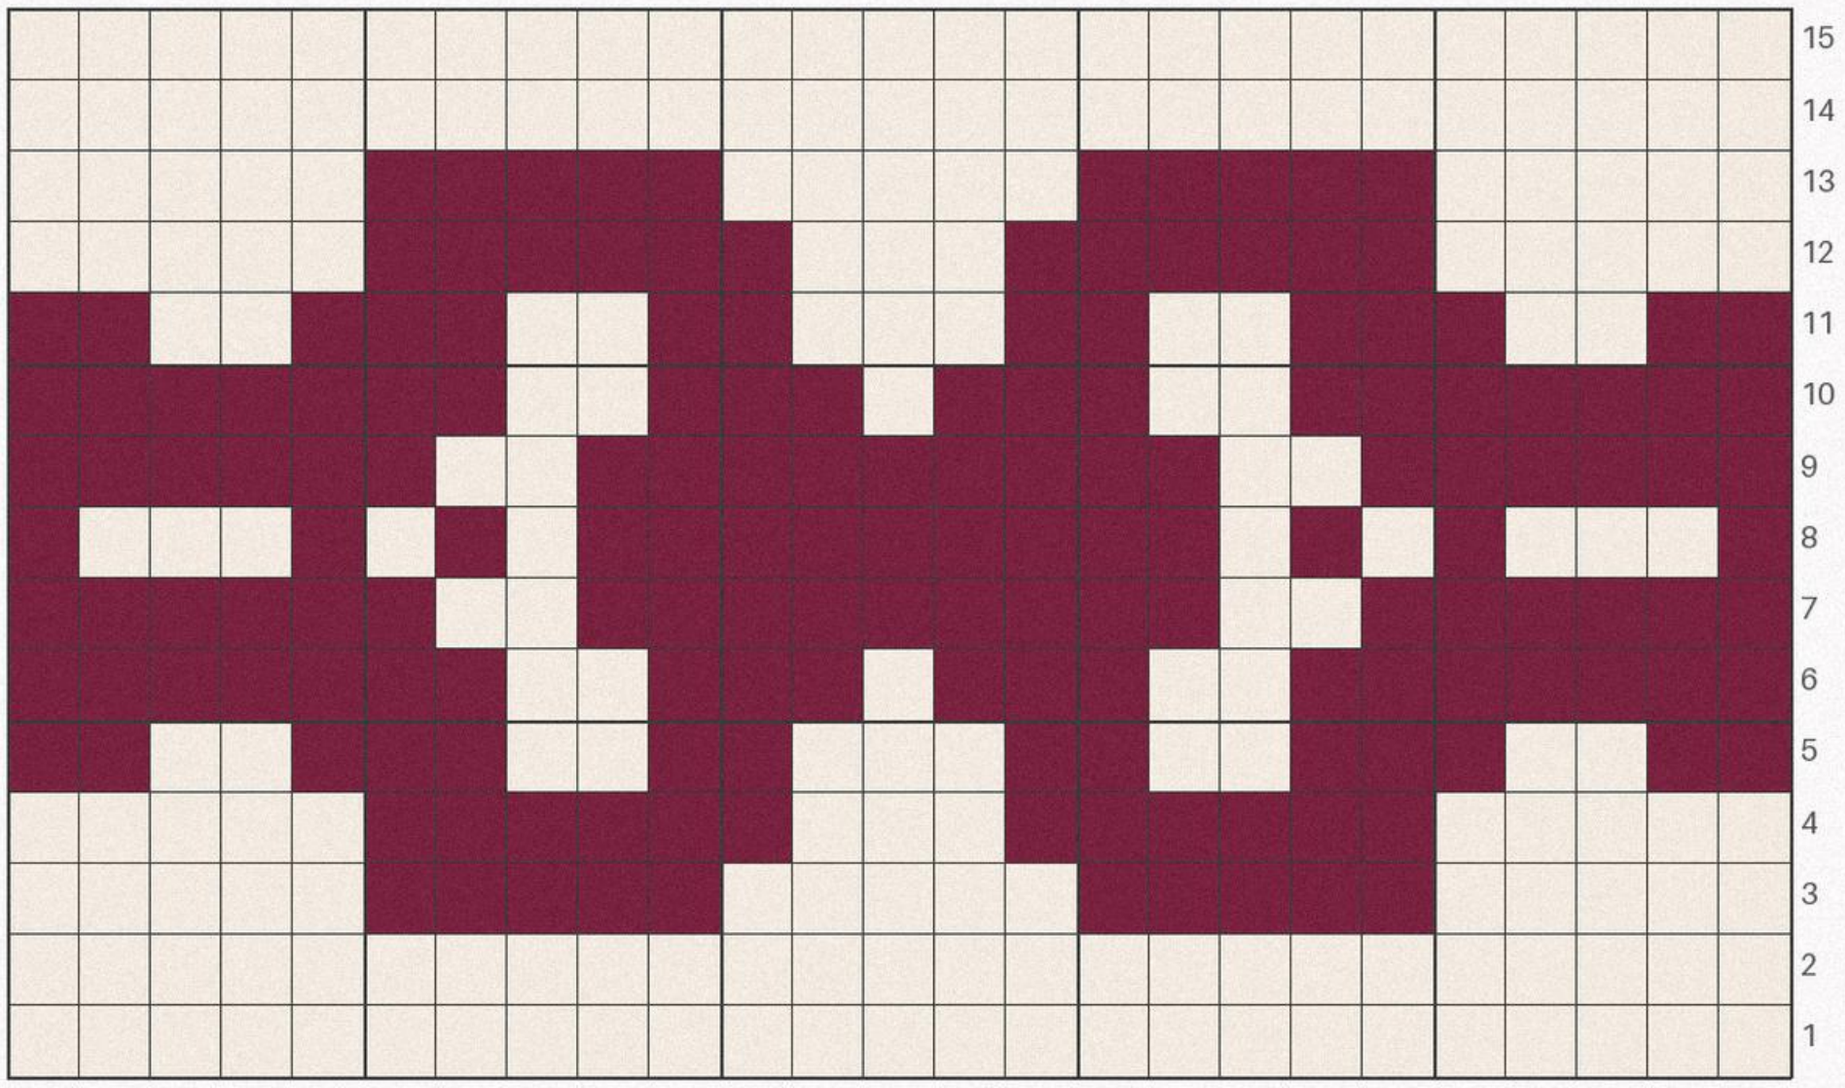

Peeries are small patterns of three to seven rows. They separate larger motifs and are a good place to try a third colour.

A two-colour band

A 25-stitch repeat for hats and cuffs.

A two-colour band

The repeat is mirrored, so it reads the same in both directions and the round joins invisibly. No float is longer than five stitches.
